

# WRL 026H - 161H

**Reversible water-cooled heat pump, gas side**

- High efficiency
- Production of hot water up to 60 °C
- Production of domestic hot water priority
- Suitable for geothermal applications

Cooling capacity 6 ÷ 40 kW  
Heating capacity 8 ÷ 48 kW

## DESCRIPTION

Water-water offering chilled/hot water, designed to meet air conditioning needs in residential/commercial complexes or industrial applications. Indoor units with hermetic scroll compressors and plate heat exchangers.

In the configuration with desuperheater, it is also possible to produce free-hot water.

The technological choices made, always oriented to the highest quality, ensure very easy installation. In fact the electrical and hydraulic connections are all located in the upper part of the unit, facilitating the installation and maintenance operations and also reducing the technical gaps and their position in as little space as possible.

## VERSIONS

- °Without storage tank
- A With storage tank

## FEATURES

### Operating field

Operation at full power with domestic hot water for the system up to 60 °C.

(for more information, refer to the technical documentation).

### Plug and play

All the units are equipped with scroll compressors and plate heat exchangers; the base and panelling are made of steel treated with RAL 9003 polyester paints.

The electric and hydraulic connections are all located on the upper part of the unit facilitating installation and maintenance. This allows reduced plant room space and installation in the smallest space possible. The heat pump can be supplied with all the components required for its installation in new systems and to replace other heat generators. It can be combined with low temperature emission systems such as floor heating or fan coils, but also with conventional radiators.

## Version with Integrated hydronic kit

The standard unit is supplied with a water filter, differential pressure switch and safety valve already installed on the service and source side (and also on the recovery side, if present).

To obtain a solution that offers economic savings and facilitates installation, these units can be configured with an integrated hydronic kit on both hydraulic sides (service and source).

Low-head and high-head pumps are available, along with a modulating 2-way valve that can only be applied on the source side to reduce consumption in applications with groundwater.

## CONTROL MPC

Microprocessor adjustment, with keyboard and LCD display, for easy access on the unit is a menu available in several languages.

- Possibility to control two units in a Master-Slave configuration
- The presence of a programmable timer allows functioning time periods and a possible second set-point to be set.
- The temperature control takes place with the integral proportional logic, based on the water output temperature.

## ACCESSORIES

**AER485P1:** RS-485 interface for supervision systems with MODBUS protocol.

**AERBACP:** Ethernet communication Interface for protocols Bacnet/IP, Modbus TCP/IP, SNMP

**KSAE:** External air sensor.

**PGD1:** Allows you to control the unit at a distance.

**SSM:** Probe to be used with the mixer valve in applications with radiant panels. The probe requires the VMF-CRP area accessory as well.

**TAH:** Ambient terminal with temperature and humidity probe - 230V AC flush-mounting model that can command an On-Off valve or a zone pump and dehumidifier consent.

**TAT:** Ambient terminal with temperature probe - 230V AC flush-mounting model that can command an On-Off valve or a zone pump.

**VT:** Antivibration supports

**VPHL:** Pressure switch valve with bypass solenoid valve, during cooling mode operation the bypass valve is closed so the water flows exclusively through the circuit with the pressure switch. During heating mode operation the water flows through both branches of the circuit.

(1) Units with two heat exchangers and storage tank, without pumps

# WRL 026 -161

## Water cooled heat pump reversible water side

Cooling capacity 6,6 ÷ 44,2 kW  
Heating capacity 7,5 ÷ 48,0 kW

- High efficiency
- Suitable for geothermal applications

### DESCRIPTION

Water-water offering chilled/hot water, designed to meet air conditioning needs in residential/commercial complexes or industrial applications. Indoor units with hermetic scroll compressors and plate heat exchangers.

In the configuration with desuperheater, it is also possible to produce free-hot water.

The technological choices made, always oriented to the highest quality, ensure very easy installation.

In fact, the electrical and hydraulic connections are all located at the top of the unit making it easy to install and maintain, also reducing the technical areas and their placement in the smallest space possible.

### VERSIONS

°Without storage tank

A With storage tank

### FEATURES

#### Operating field

Full-load operation with the production of chilled water 4-18°C, and the possibility to produce also negative temperature water down to -8°C for the evaporator and hot water for the condenser up to 55 °C.  
(for more information, refer to the technical documentation).

#### Plug and play

All the units are equipped with scroll compressors and plate heat exchangers; the base and panelling are made of steel treated with RAL 9003 polyester paints.

The electric and hydraulic connections are all located on the upper part of the unit facilitating installation and maintenance. This allows reduced plant room space and installation in the smallest space possible. The heat pump can be supplied with all the components required for its installation in new systems and to replace other heat generators. It can be combined with low temperature emission systems such as floor heating or fan coils, but also with conventional radiators.

### Version with Integrated hydronic kit

The standard unit is supplied with a water filter, differential pressure switch and safety valve already installed on the service and source side (and also on the recovery side, if present).

To obtain a solution that offers economic savings and facilitates installation, these units can be configured with an integrated hydronic kit on both hydraulic sides (service and source).

Low-head and high-head pumps are available, along with a modulating 2-way valve that can only be applied on the source side to reduce consumption in applications with groundwater.

### MODUCONTROL CONTROL

The command panel of the unit allows the rapid setting of the working parameters of the machine, and their visualisation. The display consists of 4 figures and various LEDs for indicating the type of operational mode, the visualisation of the parameters set and of any alarms triggered. The card stores all the default settings and any modifications. The regulation using an outside air temperature sensor (accessory) allows a dynamic control of the water temperature produced by increasing the energy efficiency of the system.

### ACCESSORIES

**AERBACP:** Ethernet communication Interface for protocols Bacnet/IP, Modbus TCP/IP, SNMP

**AKERSET:** It makes it possible to automatically compensate for the operation setting of the unit to which it is connected, based on a 0-10V MODBUS input signal. Mandatory accessory MODU-485BL.

**KSAE:** External air sensor.

**MODU-485BL:** RS-485 interface for supervision systems with MODBUS protocol.

**PR3:** Simplified remote panel. This makes it possible to carry out the unit's basic controls with the signalling of alarms. Can be made remote with shielded cable up to 150 m.

**VT:** Antivibration supports

**VPL:** Pressure switch valve complete with connections, piloted directly in relation to condensation pressure; the valve modulates the volume

of water needed to cool the condenser, thereby maintaining the condensation temperature unchanged.

(1) Water produced from 4°C ÷ 18°C

(2) Water produced from 4°C ÷ -8°C

(3) Shipped with holding charge only

(4) For size WRL 051 ÷ 081. The speed of the inverter pump must be set upon commissioning, according to the useful static pressure required; once it has been set, the pump will work at a constant flow rate.

(5) Only for WRL 026 ÷ 081

(6) Only for WRL 101 ÷ 161

(7) Only for WRL 026 ÷ 041

**Reversible water-cooled heat pump, gas side**

Cooling capacity 44,9 ÷ 157,4 kW  
Heating capacity 53,0 ÷ 183,3 kW

- High efficiency
- Suitable for geothermal applications
- Production of hot water up to 55 °C

## DESCRIPTION

Water-water offering chilled/hot water, designed to meet air conditioning needs in residential/commercial complexes or industrial applications. Indoor units with hermetic scroll compressors and plate heat exchangers.

In the configuration with desuperheater, it is also possible to produce free-hot water.

The technological choices made, always oriented to the highest quality, ensure very easy installation. In fact the electrical and hydraulic connections are all located in the upper part of the unit, facilitating the installation and maintenance operations and also reducing the technical gaps and their position in as little space as possible.

## FEATURES

### Operating field

Full-load operation with the production of chilled water 4-18°C, and the possibility to produce also negative temperature water down to -8°C for the evaporator and hot water for the condenser up to 55 °C. (for more information, refer to the technical documentation).

### Plug and play

All the units are equipped with scroll compressors and plate heat exchangers; the base and panelling are made of steel treated with RAL 9003 polyester paints.

The electric and hydraulic connections are all located on the upper part of the unit facilitating installation and maintenance. This allows reduced plant room space and installation in the smallest space possible. The heat pump can be supplied with all the components required for its installation in new systems and to replace other heat generators. It can be combined with low temperature emission systems such as floor heating or fan coils, but also with conventional radiators.

### Version with Integrated hydronic kit

The standard unit is supplied with a water filter, differential pressure switch and safety valve already installed on the service and source side (and also on the recovery side, if present).

To obtain a solution that offers economic savings and facilitates installation, these units can be configured with an integrated hydronic kit on both hydraulic sides (service and source).

Low-head and high-head pumps are available, along with a modulating 2-way valve that can only be applied on the source side to reduce consumption in applications with groundwater.

## CONTROL MPC

Microprocessor adjustment, with keyboard and LCD display, for easy access on the unit is a menu available in several languages.

- Possibility to control two units in a Master-Slave configuration
- The presence of a programmable timer allows functioning time periods and a possible second set-point to be set.
- The temperature control takes place with the integral proportional logic, based on the water output temperature.

## ACCESSORIES

**AER485P1:** RS-485 interface for supervision systems with MODBUS protocol.

**AERNET:** The device allows the control, the management and the remote monitoring of a Chiller with a PC, smartphone or tablet using Cloud connection. AERNET works as Master while every unit connected is configured as Slave (max. 6 unit); also, with a simple click is possible to save a log file with all the connected unit datas in the personal terminal for post analysis.

**KSAE:** External air sensor.

**PGD1:** Allows you to control the unit at a distance.

**SSM:** Probe to be used with the mixer valve in applications with radiant panels. The probe requires the VMF-CRP area accessory as well.

**TAH:** Ambient terminal with temperature and humidity probe - 230V AC flush-mounting model that can command an On-Off valve or a zone pump and dehumidifier consent.

**TAT:** Ambient terminal with temperature probe - 230V AC flush-mounting model that can command an On-Off valve or a zone pump.

**VMF-CRP:** Accessory module for controlling boilers, heat recover units and pumps (if associated with VMF-E5 / RCC panels); if associated with

the VMF-E6 panel, the VMF-CRP modules will be able to manage heat recovery units, RAS, boiler, sanitary management, I/O control, pumps.

**VT:** Antivibration supports

	E	no.	-	-	-	-	-	-	-
<b>System side heat exchanger</b>									
Type	°E,K	type				Brazed plate			
Number	°E,K	no.	1	1	1	1	1	1	1
<b>Source side hydraulic connections</b>									
Connections (in/out)	°K	Type				Grooved joints			
	E	Type							
Sizes (in/out)	°K	Ø	2"	2"	2"	2"	2" 1/2	2" 1/2	2" 1/2
	E	Ø							
<b>System side hydraulic connections</b>									
Connections (in/out)	°E,K	Type				Grooved joints			
Sizes (in/out)	°E,K	Ø	2"	2"	2"	2"	2" 1/2	2" 1/2	2" 1/2
<b>Sound data calculated in cooling mode (2)</b>									
Sound power level	°E,K	dB(A)	61,1	61,8	62,9	71,1	67,6	79,1	79,1
Sound pressure level (10 m)	°E,K	dB(A)	29,6	30,3	31,4	39,6	36,0	47,5	47,5

(1) The load indicated in the table is an estimated and preliminary value. The final value of the refrigerant load is indicated on the unit's technical label. For further information contact the office.

(2) Sound power calculated on the basis of measurements made in accordance with UNI EN ISO 9614-2, as required for Eurovent certification. Sound pressure (cold functioning) measured in free field, 10m away from the unit external surface (in compliance with UNI EN ISO 3744).

## DIMENSIONS

Size		180	200	300	400	500	550	600	650
<b>Dimensions and weights</b>
